EDUCATION

Birla Institute of Technology, Mesra

B.Tech in Computer Science and Engineering

Nov 2022 – Jul 2026

Ranchi, Jharkhand

EXPERIENCE

OZi Technologies

Data Analyst Intern

Feb 2026 – Jul 2026

Gurgaon, India

- Built production-grade BI dashboards in Redash, Looker Studio, and Power BI to monitor warehouse SLA, STO fulfillment, short-pick performance, refund tracking, PO/GRN status, putaway TAT, and delivery delays.
- Developed BigQuery reporting layers using SQL, CTEs, joins, conditional aggregation, and standardized aliases to combine order, picklist, inventory, refund, PO/GRN, product, and fulfillment datasets.
- Created short-pick and operations dashboards to track missing units, FC-level impact, SKU-level gaps, brand-level issues, and daily, weekly, and monthly trends for warehouse teams.
- Automated address intelligence workflows using Python, Pandas, Regex, and Google Apps Script, processing 55K+ orders to classify delivery zones, extract sectors, recover missing pincodes, and reduce manual mapping effort.
- Built packaging inventory forecasting and reorder alert system using BigQuery ML, SQL, Google Apps Script, and Google Sheets to forecast 90-day demand, calculate daily burn, identify stockout dates, and recommend reorder quantities.
- Designed stakeholder-ready dashboards with KPI scorecards, date/FC filters, searchable audit tables, SLA buckets, and root-cause views for warehouse, CX, category, and operations teams.

Tata Steel

Data Analyst Intern

May 2025 – Jul 2025

Remote

- Developed an interactive Power BI dashboard to improve KPI tracking, business reporting, and performance visibility by 30%.
- Cleaned, transformed, and analyzed business datasets using Python, Pandas, and NumPy, improving data accuracy by 25% and reducing manual reporting time by 40%.

PROJECTS

Utility Bill AI - Automated Data Extraction Pipeline | Python, OCR, Local LLMs, TypeScript

- Engineered an automated data pipeline to extract structured metrics from unstructured utility bills (PDFs/Images) using Tesseract OCR and a local Ollama/Qwen model.
- Designed a deterministic validation engine in TypeScript to identify missing fields, anomalous dates, and unit inconsistencies, ensuring high data quality before database ingestion.
- Developed a "Human-in-the-Loop" review workflow allowing users to audit AI-extracted values against validation rules to meet strict business data requirements.

AI Supply Chain Forecasting Engine | Python, Pandas, LLMs, Inventory Analytics

- Engineered an automated forecasting pipeline using Python and Pandas to clean transaction data, calculate 7-day sales velocity, and predict Days of Inventory (DOI).
- Integrated Llama 3.1 (Groq API) to evaluate stock risks and calculate cost-efficient reorder quantities, outputting structured JSON data logs for automated procurement.
- Automated the generation of markdown-based escalation reports for critical stockouts, significantly reducing manual tracking time and improving data-driven decision-making.

TECHNICAL SKILLS

Languages: Python, SQL

BI & Visualization: Power BI, Looker Studio, Redash, Excel, Google Sheets

Databases & Cloud: BigQuery, SQL Server

Data Analytics: CTEs, Joins, Conditional Aggregation, KPI Reporting, Data Cleaning, Data Validation, SLA Analysis, ETL, Data Modeling

Automation: Google Apps Script, Regex, Pandas, NumPy

Machine Learning: Scikit-learn, XGBoost, BigQuery ML, Feature Engineering

Tools: Git, GitHub, VS Code, Google Colab

CERTIFICATIONS

[Python Complete Course, Flask Framework & HTML Essentials - Udemy / Horizon Tech](#)

POSITIONS OF RESPONSIBILITY

Drishti NGO

Executive Member

Jan 2024 – Jan 2025

Ranchi, Jharkhand

- Mentored underprivileged students by supporting basic education, academic guidance, and learning activities.
- Collaborated with team members to organize educational initiatives and improve student learning engagement.
